DETAILED ACTION

Response to Request for Continued Examination

- This action is issued in response to applicant's Requestfor Continued
 Examination(RCE)(Paper #9) and colmpliant Amendment D(Paper #12) filed 11/3/03.
- 2. Claims 59,63,73,87,89-94,97,99-104 were amended. Claims 62,76,88,98 were canceled.
- 3. Claims 59-61,62-75,77-87,89-97,99-106 as amended, are pending.

Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. Claims 59-61,62-75,77-87,89-97,99-106 as amended, are rejected under Deaton(US Pat. No: 6,424,949) in view of Kramer(US Pat. No: 6,327, 574) in view of Eldering(US Pat. No: 6,298,348) and further in view of Hendrick(US Pat. No: 6,377,936). The rejection as cited in the First Office Action is maintained.
- 6. As per amended claims 59-61,62-75,77-87,89-97,99-106 Deaton teaches a computer system for storing and manipulating merchant level customer purchase information received from a plurality of sources including a terminal(Abstract)(Fig 2A)(Fig 4A-1/4)(Fig 14A)(Fig 15B)(Fig 26)(col 4 line 62-col 5 line 27) where the computer system has a storage device for storing

Art Unit: 3624

customer purchase information(Abstract)(Fig 2B)(Fig 3)at the merchant level (Abstract)(Fig 2A)(Fig 4A-1/4)(Fig 14A)(Fig 15B)(Fig 26)(col 4 line 62-col 5 line 27) consisting of receiving customer purchase information(col 4 line 51-col 5 line 43) at the merchant level (Abstract)(Fig. 2A)(Fig 4A-1/4)(Fig 14A)(Fig 15B)(Fig 26)(col 4 line 62-col 5 line 27) as well as searching the customer database(Figs 14A-17A) at the merchant level (Abstract)(Fig 2A)(Fig 4A-1/4)(Fig 14A)(Fig 15B)(Fig 26)(col 4 line 62-col 5 line 27). Kramer teaches organizing consumer attributes in a heirarchical manner(Abstract)(col 3 lines 22-33) and a match engine(Fig 10.1016/1018) and derivation of a match score metric(Fig 10/1020). Kramer also teaches transaction histories of customers(col 14 lines 12-col 15 line 22) which permits the creation of customer preferences and heirarchichal models(col 20 line 53-col 22 line 15). Kramer also teaches that the heirarchichal model allows recursive selection of conditional content with the iniktial selection of content using higher levels of aggregated attributes and subsequent selection using a combination of lower levels of attributes which the higher levels are based and consumer expression of interest in each level of selected content (col 3 lines 27-33) and creation of a model consisting of a vector of data values(col 3 lines 40-60). Kramer also teaches Boolean matching(Fig 10/1016) and metric matching(Fig 10/1018) and linking by mapping(Fig 10/810) as well as Boolean query(Fig 10/1034) and a target vector(Fig 10/1036). Kramer teaches categories and subcategories of conditions by successive tree-structure branching(Figs 12A)(Fig 12B0(Fig 13A)(Fig 13B)(col 20 line 52-col 33 line 37) where Kramer teaches attribute vectors(col 21 line 61-col 23 line 3) and the selection process(col 23 line 4-col 30 line 60). Kramer further teaches

Art Unit: 3624

where the customer purchase information comprises stored value information(Fig 6)(Figs 14-16)(col 30 line 60-col 33 line 38) as well as credit card transactions with merchants(col 32 lines 2-23) Eldering teaches product vectors which constitute categories of products(Fig 2D/253) which enables the offering of goods and services(col 7 line 20-col 8 line 42). Eldering teaches both a date and dollar descriptor(Fig 5/518/516) as well as demographic(Fig 5/548)correlation. Eldering further teaches a private network (Fig 1A/120) and operation on the Internet(Fig 1A/150). Eldering also teaches an entire customer profiling system(Fig 5) including hueristic rules(Fig 5/530) and priducts demographics vestors(Fig 7)(Fig 6B)(Fig 6A) and calculating product preference correlation(Fig 8B/920). Henrick teaches forming an offer to a customer based on the customer's preferences(Abstract)(col 4 lines 21-32) as well as extending the offer through the Internet(col 4 lines 10-21). Henrick also teaches use of an e-mail sent to customers which includes a hyperlink with an embedded URL to a website of a particular advertiser for a consumer(col 1 lines 39-52). Henrick further teaches an apparatus for performing targeted marketing over a network(col 2 lines 10-26). It would have been obvious to one skilled in the art at the time of the invention to combine Deaton in view of Kramer to teach part of the above. The motivation to combine is to teach a system that permits the analysis of historical consumer purchasing behavior as enunciated by Kramer(col 2 lines 38-44). Furthermore it would also have been obvious to one skilled in the art at the time of the invention to combine Deaton in view of Kramer and further in view of Eldering to teach part of the above. The motivation to combine is to teach a system that permits the profiling of consumers to determine appropriate

Art Unit: 3624

advertisements for consumers as enunciated by Eldering(col 3 lines 10-56). Finally, it would have been obvious to one skilled in the art at the time of the invention to combine Deaton in view of Kramer in view of Eldering and further in view of Henrick to teach the above. The motivation to combine is to teach a system that enables merchandisers and providers of market products to consumers over a network as enunciated by Henrick(col 1 lines 32-35).

Response to Arguments

7. Applicant's arguments with respect to the claims cited have been considered but are not persuasive. Kramer also teaches that the heirarchichal model allows recursive selection of conditional content with the initial selection of content using higher levels of aggregated attributes and subsequent selection using a combination of lower levels of attributes which the higher levels are based and consumer expression of interest in each level of selected content (col 3 lines 27-33) and creation of a model consisting of a vector of data values (col 3 lines 40-60). Kramer also teaches Boolean matching (Fig 10/1016) and metric matching (Fig 10/1018) and linking by mapping (Fig 10/810) as well as Boolean query (Fig 10/1034) and a target vector (Fig 10/1036). Kramer teaches categories and subcategories of conditions by successive tree-structure branching (Figs 12A) (Fig 12B0 (Fig 13A) (Fig 13B) (col 20 line 52-col 33 line 37) where Kramer teaches attribute vectors (col 21 line 61-col 23 line 3) and the selection process (col 23 line 4-col 30 line 60).

Conclusion

8. THIS ACTION IS MADE NON-FINAL.

Art Unit: 3624

9. Any questions concerning this communication should be addressed to the primary examiner of record, Dr. Geoffrey Akers, P.E., who can be reached between 6:30 AM and 5:00 PM Monday through Friday at 703-306-5844. If attempts to contact the primary examiner are unsuccessful, the primary examiner's superior, Mr. Vincent Millin, SPE, may be telephoned at (703)-308-1065.

The fax number for Formal or Official faxes and Draft or Informal faxes to Technology Center 3600 or this Art Unit is (703)-308-3687. Any inquiry of a general nature or relating to the status of this application should be directed to the Group receptionist whose telephone number is (703)-308-1113.
